

Your Diversion is Subject to Standard Terms 91 and/or 93 for the Sacramento-San Joaquin Delta Watershed

Cannabis cultivators diverting under the basis of a Cannabis Small Irrigation and Use Registration in this watershed area **must cease diverting water** when the Division of Water Rights gives notice through the online mapping tool that Term 91 or Term 93 is in effect. Cannabis cultivators are required to check the online mapping tool daily and prior to diverting water to ensure water is available to divert. Cannabis cultivators are encouraged to subscribe to the “Term 91 Updates” email notification list under “Water Rights” at the State Water Board [email subscription website](#) to receive updates and information related to Term 91.

Standard Terms 91 and 93 prohibit holders of certain water right permits and licenses from diverting water in the Sacramento-San Joaquin Bay Delta (Bay Delta) watershed during times when the Central Valley Project and State Water Project (collectively, the Projects) are required to release Supplemental Project Water to meet water quality objectives in the Bay Delta watershed. Curtailments made under Terms 91 and 93 protect the releases of Supplemental Project Water and ensure the released water will be bypassed through the Bay Delta to improve water quality.

Additional information on Terms 91 and 93 and Bay Delta Water Quality Objectives are provided below.
